INNOCROSS-R™

Ready to use riboflavin solution for corneal collagen cross-linking
INNOCROSS – R™ riboflavin solution is recommended for use in all corneal collagen cross-linking procedures. The riboflavin, activated by UV-light, initializes the formation of collagen cross-links to achieve stiffening of the cornea. Two INNOCROSS-R™ formulations are available in sterile, pre-filled syringes, an isotonic and a hypotonic.

**INNOCROSS-R™ Isotonic**

- **Art. No.:** 1800-5010-00
- **Ingredients:** Riboflavin-5’-phosphate (0.1%), Dextran T500 (20%)
- **Packaging:** Sterile 3 ml syringe
- **Indication:** For corneas with a thickness of more than 400 μm without epithelium¹

**INNOCROSS-R™ Hypotonic**

- **Art. No.:** 1800-5020-00
- **Ingredients:** Riboflavin-5’-phosphate (0.1%)
- **Packaging:** Sterile 2 ml syringe
- **Indication:** For corneas with a thickness of less than 400 μm without epithelium²

INNOCROSS-R™ Isotonic is the standard isotonic riboflavin solution for corneal cross-linking. INNOCROSS-R™ Hypotonic is the hypoosmolar riboflavin solution which is used to swell thin corneas by osmotic action².

For further information about the INNOCROSS-R™ or corneal cross-linking, please contact us.
