

Facial photography and complexion analysis

Win patients – improve compliance with **Adonia**.

FotoFinder **Adonia** combines professional photo documentation with comprehensive skin analysis. Using standardized and informative images showing treatment progress and personalized treatment plans, **Adonia** helps you to win new patients and also improve their satisfaction and their level of compliance with treatment. It is a recipe for success for aesthetic practices!

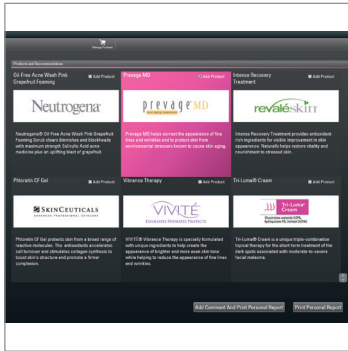

Impressive complexion analysis.

FotoFinder **Adonia** is a high-tech program for complexion analysis. The software-controlled camera system enables you to take several polarized facial photos quickly and easily. **Adonia** visualizes pores, pigmentation, vascular conditions, wrinkles and the evenness of the skin and compares these results with the patient's peer group. A fantastic tool to attract clients for products and treatments!

Setting the Pace in Skin Imaging Worldwide.

Develop tailored treatment plans.

FotoFinder **Adonia** enables you to engage in a new type of dialogue with your patients. With the aid of impressive screen displays, you can explain several skin characteristics and select recommended procedures from the product and treatment database. These are then compiled in a report and printed out on request. Now you can produce personalized treatment plans in no time at all! The product and treatment database can be customized to your individual range of skin services.

Highlight the progress with great “before and afters”

Whether you perform facelifts, laser treatments, peelings or fillers – the outstanding photos from **Adonia** reveal the progress and success of your treatments at a glance. The 180° rotatable portrait stand has five pre-defined recording positions for informative and reproducible photos of unrivalled quality of the face. Display, compare and edit your images either on your computer or conveniently on your iPad with the help of the FotoFinder **Universe** app!

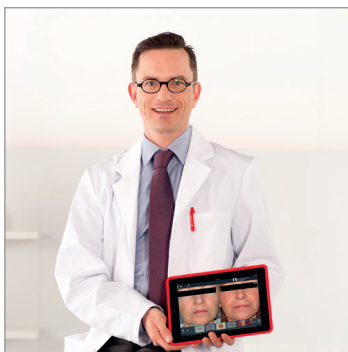

Improve patient compliance.

Particularly with non- and minimally invasive treatments, patients often only notice treatment success after several sessions. FotoFinder **Adonia** produces highly informative before-and-after images which reveal even the most minor changes after each treatment. This improves both patient satisfaction and compliance. With **Adonia** you can increase the number and frequency of treatments per patient, thus boosting your revenue!

Aesthetic imaging for your success:

- Analysis of pores, pigmentation, redness, wrinkles, evenness
- Comparison of results with the patient's peer group
- Rotating camera for standardized photos from 5 viewing angles
- Brilliant 18 megapixel resolution
- Personalized treatment plans and reports
- Adjustable product and treatment database
- “Ghost” function for reproducible follow-up photos
- Optional iPad integration
