ALL IN ONE SOLUTION | HYDRATING DROPS

**YAL PRODUCT LINE**

ALL IN ONE SOLUTION

**YALFRESH**

## FEATURES

**YALFRESH** All in One Solution is characterized by its formulation based on **Hyaluronic acid**, a natural polysaccharide capable of increasing the wettability of the lenses, prolonging the comfort of contact lens wearers.

**Hyaluronic acid** has excellent hygroscopic properties. In contactology, this extraordinary capacity for water retention is used to improve the hydration of the precorneal area. Another important feature of **Hyaluronic acid** is mucus-adhesiveness, which allows it to form a long-lasting coating and provides a stable protection to the corneal surface. Finally, it has viscoelastic properties that lubricate the ocular surface, reducing surface friction during eye movements and eyelid blinking.

**YALFRESH** All in One Solution is indicated for the disinfection, storage, cleansing, rinsing, hydration and prevention of protein deposits of all types of soft and color contact lenses.

## INGREDIENTS

Ethylene diamine tetra acetic acid 0.01%, PHMB 0.00015%, Hydroxyethylcellulose, Hyaluronic acid macromolecular, Natrium chloride, Dibasic sodium phosphate, Monobasic sodium phosphate, Sodium hydroxide anydrus, Purified water.

ALL IN ONE SOLUTION

# YALFRESH

## BENEFITS

Effectiveness in disinfection and film-forming, emollient and nourishing activity.  
**It respects and protects the corneal epithelium.**

Efficiency in cleaning contact lenses.  
**Extended comfort during contact lens wear.**

Formulation containing hyaluronic acid.  
**It prevents dehydration of contact lenses.**

Compatibile con i tessuti ed i liquidi oculari  
*Compatible with ocular tissues/fluids*

Deterge  
*Cleans*

Idrata  
*Hydrates*

Umetta  
*Lubricates*

Previene i depositi proteici  
*Prevents protein deposits*

Disinfetta  
*Disinfects*

Risciacqua  
*Rinse*

Indicato per lenti morbide  
*Suitable for soft contact lenses*

Acido Ialuronico  
*Hyaluronic Acid*

# I-FRESHYAL

## FEATURES

The humectant solution **I-FRESH YAL** is characterized by its formulation containing **Hyaluronic acid**.

The lubricating and viscosifying properties of Hyaluronic acid reduce the friction generated by the rubbing of the eyelid-contact lens-cornea, prevent and soothe the typical disorders related to the tear film instability and alleviate ocular irritations caused by mechanical stress due to a foreign body or after the use of any type of contact lens.

**I-FRESH YAL** solution restores the hydration of soft lenses and the wettability of rigid gas permeable ones. It is indicated as a lubricant solution during contact lens application, in case of tired and poor tearing eyes, or when sensations of foreign bodies are felt into the eyes.

## INGREDIENTS

Ethylene diamine tetra acetic acid 0.023%, PHMB 0.00005%, Hydroxyethylcellulose, Hyaluronic acid macromolecular 0.2%, Natrium chloride, Dibasic sodium phosphate, Monobasic sodium phosphate, Sodium hydroxide anydrus, Purified water.

HYDRATING DROPS

# I-FRESHYAL

## BENEFITS

Humectant action on contact lenses.

**Extended comfort during contact lens wear.**

Hydrating and refreshing action.

**It relieves burning symptoms also due to poor blinking.**

It stabilize the tear film.

**It contributes to the maintenance of ocular homeostasis.**

Compatibile con i tessuti ed i liquidi oculari

*Compatible with ocular tissues/fluids*

Idrata

*Hydrates*

Umetta

*Lubricates*

Indicato per lenti morbide

*Suitable for soft contact lenses*

Silicone Hydrogel

*Silicone hydrogel*

Indicato per lenti RGP

*Suitable for RGP contact lenses*
